CERTUS COMBI AST

Advanced Spreading Technology

– the safe way!

Certus Combi AST

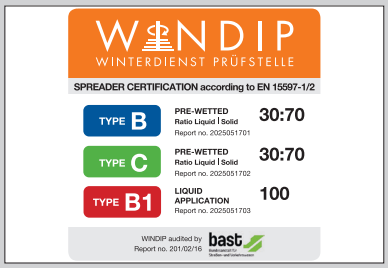

- effective, flexible and reliable combi spreader

Certus Combi AST is a large bulk spreader, developed in response to new trends and market demands. Dealers and customers requested a low-profile auger spreader with a robust stainless steel construction, with the option of a liquid tank at the rear end of the dry material hopper, ensuring optimized weight distribution and a system capable of handling FS100. With the Certus Combi AST, these requirements have become reality. The spreader combines high performance, great flexibility, and a well-thought-out design, with optimal use of available space.

The machine is available in both black and stainless steel, ensuring long life span, and reliable performance, even under demanding conditions. In addition, the spreader is prepared for an integrated 1,400-liter inner tank.
The Certus Combi AST is built with a flat front design, allowing installation of a weight-optimized 2,500-liter front tank, without wasting space, and option for additional 1,750 liters or engine.

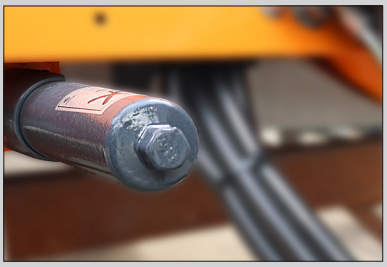

The advanced liquid system is equipped with a new pump, that complies with the EN 15597-2 B1 standard, and delivers up to 400 liters per minute. Together with the Virtus liquid distributor, a spray boom with a spreading width of 4-12 meters, and the option of FS100 application, the Certus Combi AST offers maximum flexibility for a wide range of operational needs. The system has also been tested and approved in the acclaimed BASt test, documenting the machine's performance and precision under realistic conditions.

The Certus Combi AST has successfully passed the following BASt tests: B, C and B1 – EU's most demanding dosing and spreading tests.

The Mixus spreading disc is now equipped with plastic blades to optimize the spreading picture.

The hydraulic high-pressure filter has been mounted outside the machine house for easier service.

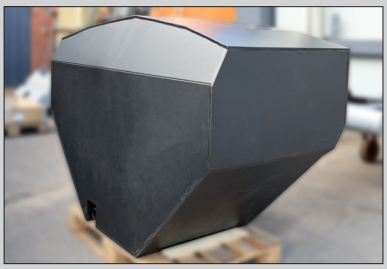

The Certus Combi AST is designed with easy and accessible maintenance and service in mind. Removable side panels on the machine house provides quick access to all key components, and electrical components are grouped in one place for easy overview. The safety grates have been redesigned for easy mounting and removal.

With its well thought out design and high flexibility, the Certus Combi AST is built to deliver precision, reliability, and efficient winter maintenance under all conditions.

Options

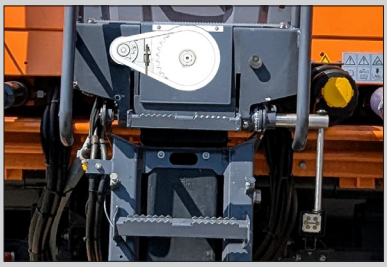

- Auger trough made of Hardox steel
- Inner tank with 1,400 liters
- Machine in stainless steel
- Weight-optimized front tank with 2,500 liters, with option for additional 1,750 liters or engine

Prepared for an integrated 1,400-liter inner tank, providing flexibility and optimized weight distribution.

More space and removable side panels gives easy access to all components inside the machine house, for service and maintenance.

The transmission is mounted at the rear of the machine, for easy service and maintenance.

EpoMaster X2

EpoMaster X2 is Epoke's advanced remote control, primarily for the remote control of large salt spreaders. EpoMaster X2 is the result of an ongoing collaboration between users and Epoke's in-house software engineers. The remote control's functions cover all types of requirements – from the challenges of hard-to-reach sections in mountainous areas, to long, straight busy main roads in urban areas.

The EpoMaster X2 is available with integrated navigation with custom audio messages. In case of deviations from the route, the remote control has "return to route" guidance.

EpoMaster X1

EpoMaster X1 meets the requirements for simple and logical operation. It has a graphical user interface, which is very user-friendly.

The operation is based on the latest technologies with e.g. 7" color screen with touch panel, where a menu system ensures simple operation with the possibility of individual setup according to the user's/driver's wishes.

Epoke Group

We produced our first sand and salt spreader in 1955, and since then we have solely focused on the development, production and sale of machines and equipment for the treatment of icy roads. Today, we are a global leader. In Denmark, sales are carried out by our own sales staff, while abroad our subsidiaries and 31 dealers manage sales.
